

ENVIRONMENTAL POLICY STATEMENT

Background

The impact our actions have on the environment is becoming an increasingly important issue across the globe - particularly with regard to environmental pollution. We recognise the influence our operations have on the environment and consider our environmental management system as a fundamental part of our company strategy.

Our Commitment

We are committed to providing the highest quality of service whilst maintaining an Environmental Management System (EMS) that takes these concerns into account. It is our aim to protect the health, safety and welfare of our employees, contractors, customers and the general public, whilst contributing to the well being of the environment

Our Strategy

As part of our policy of continuous improvement we are constantly reviewing our EMS and are currently seeking accreditation to ISO 14001:2004. This environmental policy is the backbone of our system for managing environmental impact, it is supported by all Employees within the organisation, reviewed annually and is meticulously applied throughout all the companies operations.

We are committed to reducing the impacts our operations have on the Environment by preventing pollution, reducing waste and continually improving our environmental performance by actively:-

- Meeting and where possible exceeding relevant legislative requirements.
- Re-using/recycling materials where practically possible.
- Managing our own existing energy resources efficiently.
- Reducing emissions wherever possible/practical.
- Utilising materials in our products and services which are safe to use and which can be re-used, recycled or disposed of safely.
- Work with our employees, suppliers and contractors to help minimise the effects of their operations on the environment.
- The inclusion of any relevant environmental issues on company training programmes, inductions, method statements and risk assessments etc
